## About your hosts

NYHCA is a managed care contracting entity representing 52 skilled nursing facilities in the New York Metropolitan Area. This area includes the five boroughs, Nassau, Suffolk and Westchester. NYHCA services include managed care contracting, patient placement services, group purchasing, nursing resources, and rehabilitation services to name a few.

Southern New York Association, Inc. represents sixty-six facilities with approximately 16,000 residential health care facility beds (voluntary, proprietary and government owned) that operate in the southern New York regional area. This encompasses the five boroughs, Nassau, Suffolk and Westchester. A major focus of our organization is to provide information and consultation to our membership to enhance quality of care for residents while assuring that members are prepared for policy and legislative changes that impact nursing homes. These changes relate to federal and state guidelines and mandates for nursing home. In addition, the Association is an advocate for all its members at all levels of government.

Alliance Rehab offers a proprietary model for the delivery of rehabilitation and wellness services. Using best practices and advanced clinical programming, we help facilities to achieve measurably improved patient outcomes while assuring successful rehab operations through a menu of options for individual senior-living facilities and service organizations. Alliance Rehab provides consulting services and other licensed resources that help a facility's own staff launch and manage this proven program.

The OmegaCare System is an approved, user friendly suite of software products, designed to support and augment operations and clinical results in Long-Term facilities. OmegaCare is continually advancing in technology to provide software that is fully integrated and designed to help reduce the burden of medical records keeping, documentation and reporting. The OmegaCare System is a complete application and is the logical solution for long term care facilities. It allows for continuous integration between the facility staff members, physicians and pharmacy. Data is entered one time, and is available where needed throughout the program.
